

Regulatory

AI is transforming the way that businesses approach their regulatory compliance programs and strategies, especially for environmental and natural resource matters. Michael Best's Regulatory group leads the way in helping organizations use AI to identify and track their regulatory obligations across different business units, geographic areas, and jurisdictions. AI is proving to be a critical tool for keeping up to date and reducing compliance costs in the fast-changing area of US regulation.

Smart Warehouses and Smart Manufacturing: Our Regulatory group and AI team understand that clients are leveraging AI technology in smart supply chain, warehousing, and manufacturing. AI helps companies predict market trends, allowing for better management of supply chain logistics, costs, and product inventories. Our Regulatory group can advise companies that are utilizing AI, and generating additional data in real-time, to ensure that their operations are complying with environmental and other regulations throughout their supply chains.

Real-Time Monitoring for Environmental Compliance: Our Regulatory group has deep experience with monitoring, tracking, auditing, and reporting of regulatory compliance. We can help clients develop AI-supported systems to perform all of these functions more efficiently and accurately. AI can help a company by automating the processes of data collection, analysis, reporting, and auditing. This can minimize potential violations, fines, and reputational damage by detecting anomalies, trends, and risks in real-time and alerting the relevant stakeholders. AI can also provide insights and recommendations on how to

improve compliance performance and optimize business outcomes.

Risk Mitigation and Guidance Outside of Regulatory: Our Regulatory group works alongside our AI Center of Excellence team, which is composed of subject-matter experts in several areas of law. We can assist you with navigating a variety of AI-related challenges, from workplace usage policies and ethics to data privacy and cybersecurity compliance and strategies.

As organizations integrate AI technology, our Regulatory group offers proactive, strategic counsel and partners closely with clients to navigate the regulatory complexities that accompany harnessing the power of AI responsibly.

By leveraging AI, a company can reduce the costs and burden of compliance and enhance its competitiveness and innovation.
