

Venture Best

AI is taking the world of startup and venture capital to a new dimension, and our Venture Best team is well positioned to assist clients in navigating the technology tools, opportunities, and legal challenges this presents to early and late-stage startups, VC/PE funds, and their portfolio companies.

In addition, AI has the potential to significantly boost venture capital capabilities by enhancing the assessment of investment opportunities, leveraging data analysis, predictive analytics, portfolio management, due diligence, and deal sourcing.

Our Venture Best team helps emerging companies and investors utilize the benefits of AI to make connections, structure and close transactions, and avoid legal pitfalls. We also counsel early-stage businesses on their financial, organizational, and regulatory needs as they grow.

Many of our lawyers are also investors and entrepreneurs themselves, including within the AI ecosystem, giving us firsthand insight into effective strategies for finding the right investment partners, structuring deals, and achieving growth objectives. Leveraging this deep industry insight, we engage directly with AI-focused companies to provide tailored advice that addresses their unique needs, maximizing their potential for growth and success.

On the investor side, we represent clients in fund formation and investor services, private equity investments and acquisitions, and venture capital and growth capital financing. Our team advises funds and fund sponsors on structuring, forming, and operating all types

of investment vehicles, from traditional venture capital and private equity funds to special-purpose vehicles, pledge funds, and bespoke investment strategies.

Building a scalable business also demands foundational support—from seed funding through initial public offering. Our Venture Best legal team helps entrepreneurial companies throughout the startup lifecycle by laying a strong foundation for growth, using AI to cover all the bases while also having measures already built in to maximize the protection of client information from the pitfalls of AI.

Our team is uniquely positioned to advise innovators on emerging industries and technologies and how best to utilize AI for optimal growth, including blockchain and digital currencies, software as a service (SaaS), data analytics, life sciences, climate tech, eCommerce, edtech, digital health, cannabis, and interactive gaming, among many others. We work closely with high-growth entrepreneurs—and their VC and angel investors—to help companies utilize the benefits and advantages of AI.
